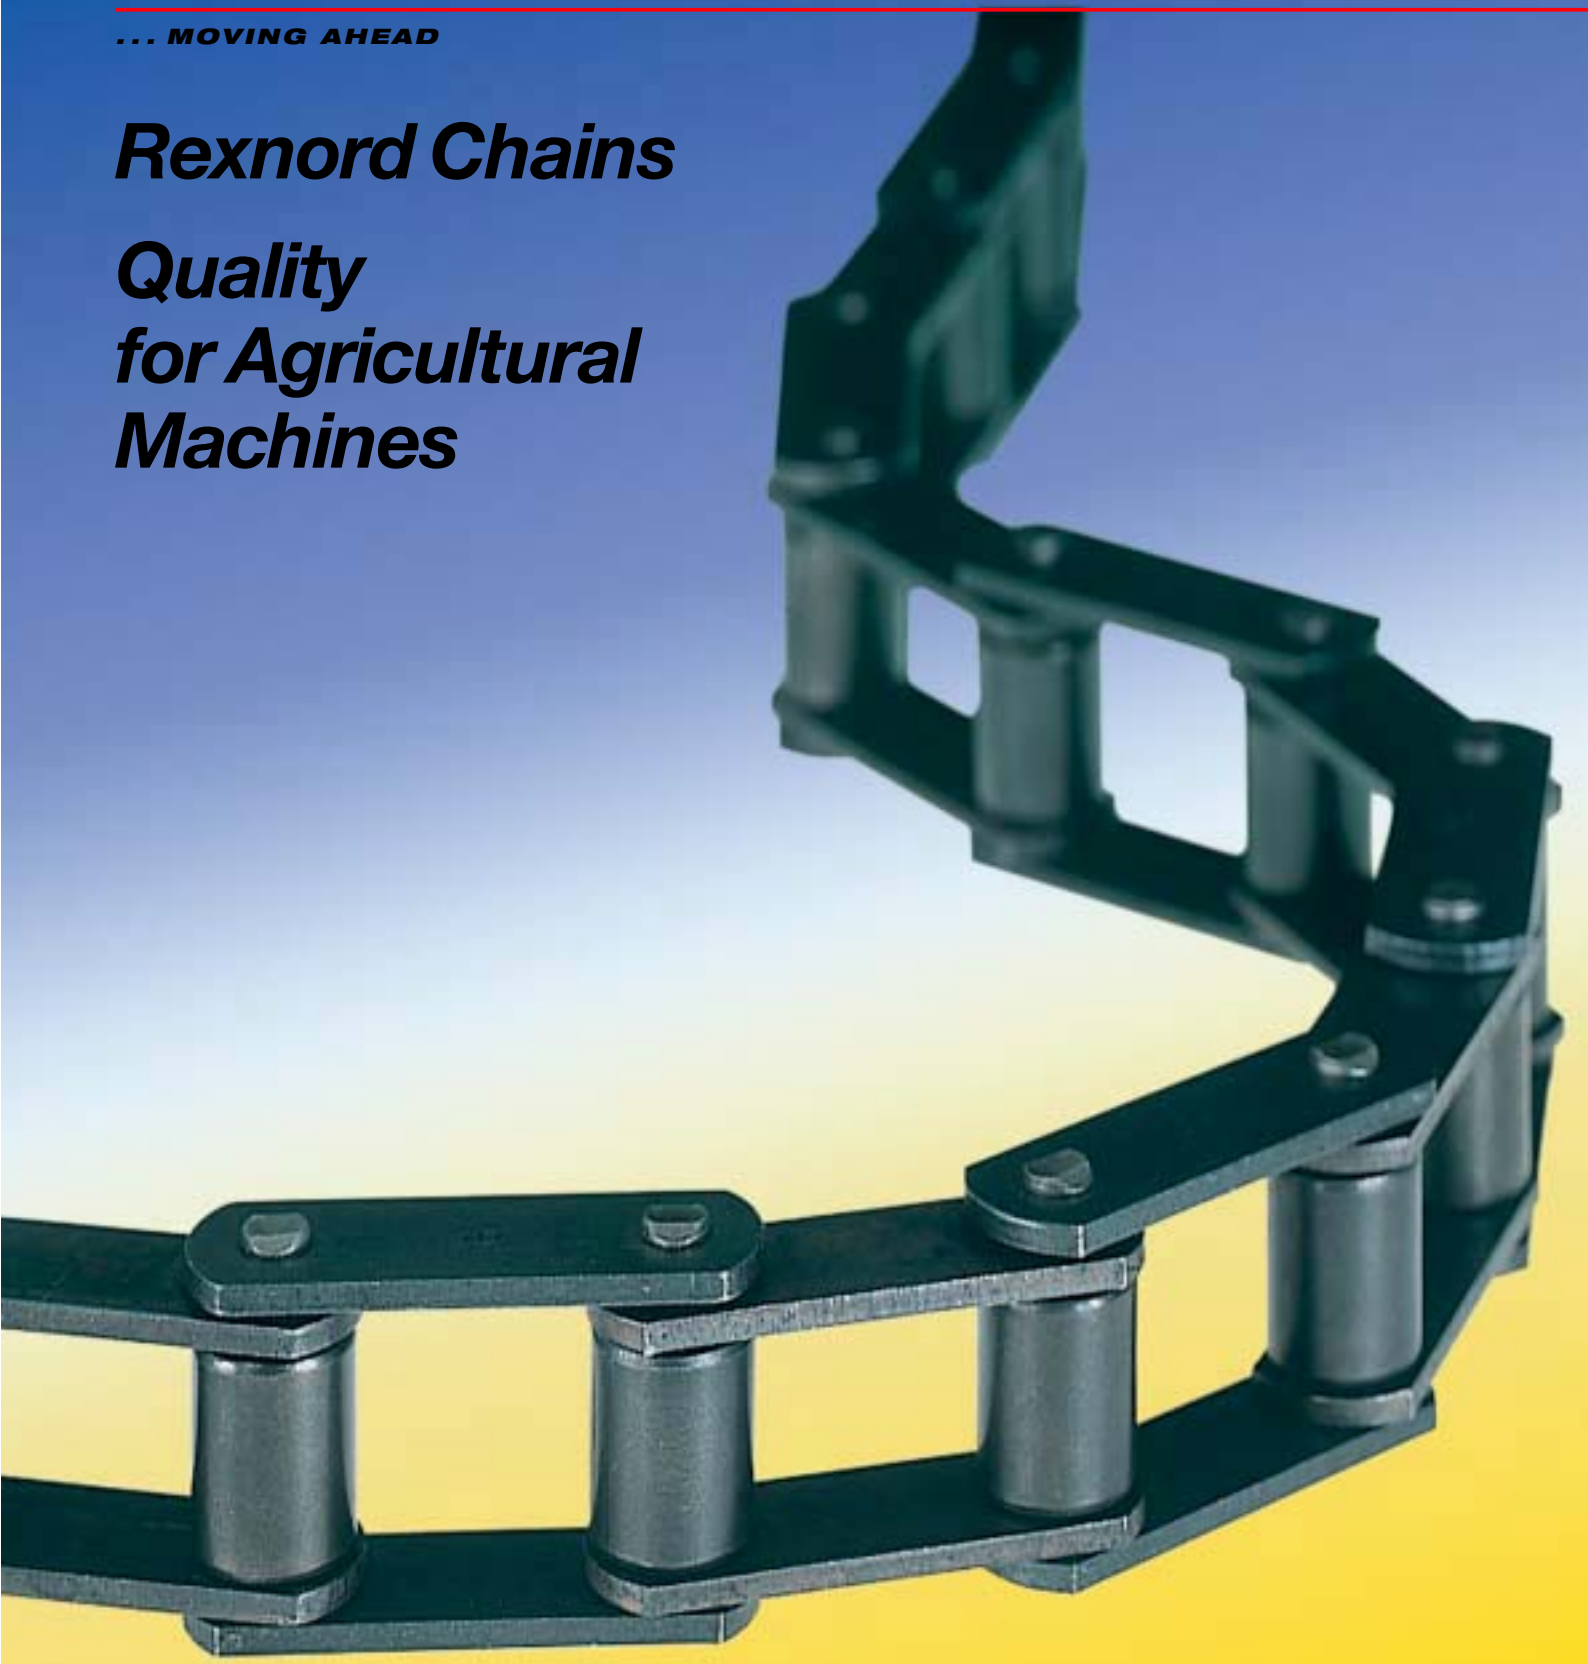
Rexnord

... MOVING AHEAD

Rexnord Chains

Quality for Agricultural Machines



Think like partners – act like partners

Speed

The speed with which modern technologies change our world is breathtaking.

For us two aims are certain:

We are determined, with our products for our customers, to occupy a leading position as regards technology.

We want, together with our customers, to achieve quality and sales growth.

Consulting

Our application engineers concentrate on the customer's interests.

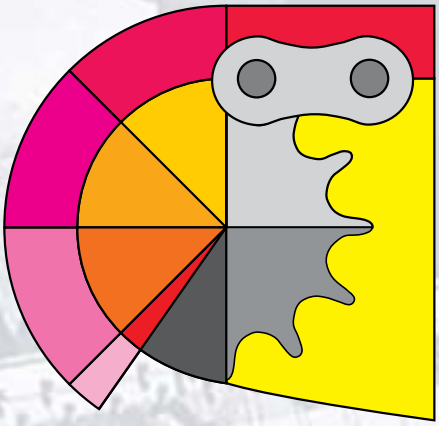
We concentrate on the individual wishes and needs of the customer when calculating and identifying the correct chain drive.

Together with our customers, we find solutions, which optimize the factors of safety, service life and price.

Partnership

We know what the customer needs in his market for his product in the future.

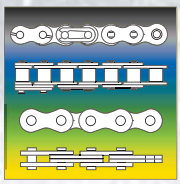
We listen to you and observe driving and conveying world-wide. We carry out analyses on the customer's premises and apply practicable solutions. So that you remain competitive.

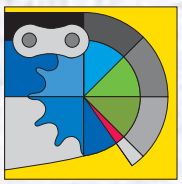


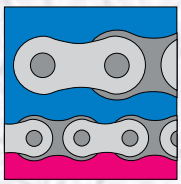
Service

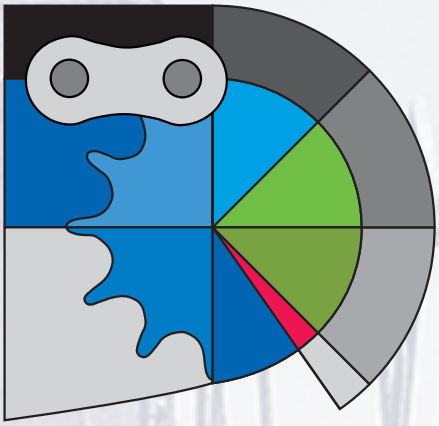
We are only satisfied when you are.

We have created the conditions for this by means of intensive consulting, partnership and our own sales activities. Thus there is a combination of our market know-how, technical competence, customer service and the satisfaction of our customers.

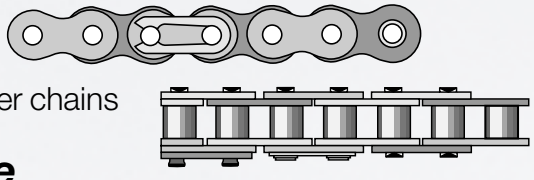




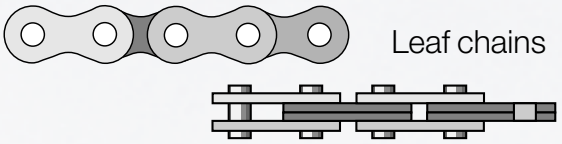




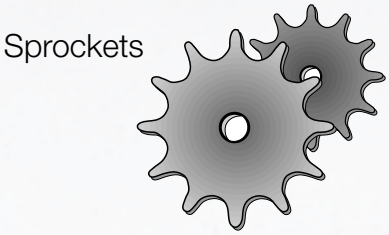
Product range



Roller chains



Leaf chains



Sprockets

Competence

As the manufacturer of one of the most extensive chain ranges for drives and conveying we are an established partner of leading companies. Our 5,000 chain variants provide an impressively large number of solutions and flexibility.

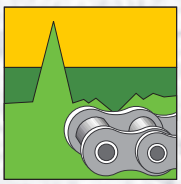
Innovation

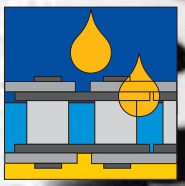
The secret lies in the production methods and the material.

Several thousand tools developed by ourselves rotate in the flow of production.
650 special tools were constructed by us for the manufacture of special chains.
30 special steels, alloyed, stainless, patented, are processed.
Moreover, we offer many different lubrications.
Through our customers we have become a specialist in surface refinement and the heat treatment of steel.

Quality

For Rexnord means that the customer comes back and not the chain.





Rexnord Methods of Production Towards Optimizing Quality

High Case Hardness

The pins and bushes that constitute the chain bearing area are furnished with an optimally deep hardness layer. This stratum contributes essentially to the life span. Surface hardness is approximately 60 HRc.

High Case and Depth Hardness.

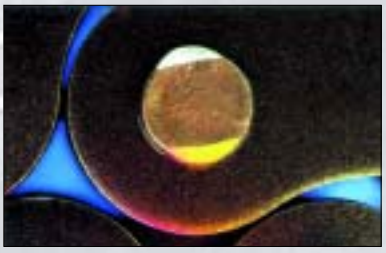
Ball-Drifting

Ball-drifting of the plate bores serves to achieve strain-hardening of the material. All punching flutes and sharp edges are simultaneously removed. Press fits and fatigue strength are so optimally improved.

Ball-Drifting.

Shot Peening

All plates, bushes and rollers are shot peened for further improving fatigue resistance. This effective cold processing moreover consolidates the surfaces and increases their load-bearing properties. Such parts have a built-in tension and therefore higher resistance against loading.



Shot Peening.

Shock-Resistant Rollers

Rexnord Rollers are produced to high precision, of a uniform wall thickness and absolutely free from any taper. An optimal seating and smooth running is so warranted. The Rollers are shot-peened and posses a high fatigue strength for resisting running-in impacts.

Shock-Resistant Rollers.

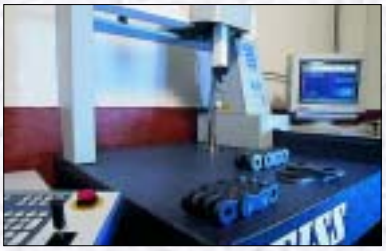
Pre-Loading

Rexnord Roller Chains are “pre-run-in” under high load. Customary chain run-in elongation is thereby minimized and expensive tensioning in application avoided. All Chains are subjected to a severe length control. High pre-loading enhances their load-bearing property and reliability.

Pre-Loading.

Uniform Quality

The uniform quality of Rexnord chains is not merely ensured by initial and final inspections, but far more, also by in-process routine testing of the individual elements.



Uniform Quality.

Advantages of Rexnord Chains

Contrary to widespread opinion, the breaking load of a chain is not an indicator of resistance to fatigue and long wear life.

Therefore, chains manufactured to specified standards, and with equal breaking loads, differ in quality from manufacturer to manufacturer.

Important for quality are fatigue strength and wear resistance.

Special manufacturing techniques developed by Rexnord formulate such factors as fatigue resistance, wear resistance and tensile strength to provide their optimum combination.

This jig boring machine plays a large role in the precision of the Rexnord chain tools.

For the testing of fatigue strength, we use, among others, this – designed according to the latest technological knowledge – high frequency fatigue testing machine.

Quality Management System

Rexnord Kette GmbH employs a quality management system which is reflected in the special commitments to our customers.

The quality management handbook contains the quality management system from Rexnord Kette GmbH.

Thereby all our customers have access to the information how Rexnord realises and guarantees its products.

We wish to provide all our colleagues with some helpful guidelines, which will help to support and motivate them in their endeavours to work with quality consciousness.

Contents:

This handbook contains an all-round binding description, which is written in 20 elements and according to the internationally known DIN EN ISO 9001.

Therefore, the colleagues involved have access to process details, working details and testing methods as well as all-round processing practices.

Furthermore, we are constantly improving our products and organisation. Part of this improvement involves following up internal and external developments with positive interest and constant evaluation of our market.

The fruits of this policy are shown by the certification awarded according to DIN EN ISO 9001, DIN EN ISO 14001 and API Spec Q1 and Spec 7F through American Petroleum Institute
