

FLEXIBLE COUPLINGS – N-EUPEX, N-EUPEX DS SERIES

General	7/2
Benefits	7/2
Application	7/2
Design and configurations	7/3
Modular principle of N-EUPEX types	7/5
Technical specifications, N-EUPEX series	7/8
Assignment of N-EUPEX sizes to IEC standard motors	7/10
Type A for easy elastomer flexible replacement	7/11
Type B	7/12
Type B with clamping elements	7/13
Type DK for large misalignment with simple installation and removal	7/14
Type DKS	7/15
Type H	7/16
Type D for easy elastomer flexible replacement	7/18
Type E	7/20
Type P with brake drum	7/22
Type O with brake drum	7/24
Type DBDR with brake disk	7/26
Type ABD with brake disk	7/28
Type ERN with slip unit	7/29
N-EUPEX DS series	7/31
General	7/31
Technical specifications, N-EUPEX DS series	7/31
Type ADS for easy elastomer flexible replacement	7/32
Type BDS	7/33
Type HDS	7/34
Spare and wear parts	7/36

GENERAL

N-EUPEX as overload-holding, fail-safe series

N-EUPEX DS as overload-shedding, non-fail-safe series

N-EUPEX and N-EUPEX DS pin couplings connect machines. They compensate for shaft misalignment, generating only low restorative forces. The torque is conducted through elastomer flexibles, so the coupling has typically flexible rubber properties.

N-EUPEX couplings are overload-holding. By contrast, the N-EUPEX DS series is designed so that overload or advanced wear causes irreparable damage to the elastomer flexibles. The metal parts of N-EUPEX DS couplings can then rotate freely against one another without contact.

Coupling suitable for use in potentially explosive atmospheres.

Complies with the current ATEX Directive for:

CE  II 2G Ex h IIC T6 ... T4 Gb X

 II 2D Ex h IIC T85 °C ... 110 °C Db X

 I M2 Ex h Mb X

Benefits

N-EUPEX couplings are designed on the modular principle and have a very simple construction. N-EUPEX types are made up of subassemblies to suit requirements. The couplings are assembled by simply fitting the coupling halves together. Wear is restricted to the elastomer flexibles, which must be replaced at the end of their service life.

Depending on type, the elastomer flexibles can be changed without moving the coupled machines.

The coupling parts are readily available from stock and are mostly finish-machined, i.e. with finished bore, keyway, set screw and balancing.

Application

The N-EUPEX coupling is available as a catalog standard in 23 sizes with a rated torque of between 28 Nm and 71000 Nm. The coupling is suitable for ambient temperatures of between -30 °C and +80 °C. By using alternative elastomer flexibles, the permissible ambient temperature range can be extended to between -50 °C and +100 °C. Frequently, the coupling is used to connect the motor to the gear unit input shaft. The coupling is suitable especially for drives with uniform to average dynamic loads.

Examples of applications are pump drives, ventilator drives or crane running gear. Furthermore, N-EUPEX couplings can be used as add-on couplings, particularly on FLUDEX fluid couplings or ARPEX AKR safety couplings. In the case of drives with a diesel engine, N-EUPEX couplings are suitable for driven machines with a low mass moment of inertia. In the case of diesel engine drives, the actual dynamic coupling load should be checked by measurement or torsional vibration calculations.

Design and configurations

N-EUPEX and N-EUPEX DS couplings consist of two coupling halves mounted on the machine shafts. The coupling parts are connected positively by means of elastomer flexibles. On the two-part variant, the elastomer flexibles can be changed only if one of the coupled machines is moved.

On the three-part variants, the bolted cam ring can be released and moved to enable the flexible to be changed without moving the coupled machines.

Elastomer flexible of the N-EUPEX series

The flexibles of the N-EUPEX coupling are subjected to compression. This results in progressive torsion spring characteristics. If the flexibles are irreparably damaged, the hub parts come into contact with metal. This causes the torque to continue to be transmitted in "emergency mode" for a short period of time.

Elastomer flexible of the N-EUPEX DS series

The flexibles of the N-EUPEX DS series are subjected to compression and bending forces. A linear torsion spring characteristic curve is characteristic in this regard. If the flexibles are irreparably damaged, the metal parts turn against one another without contact, and the power transmission is separated. Fitting new flexibles will make the coupling once more usable. The capacity of the N-EUPEX DS series to shed overloads is especially in demand for highly sensitive machines.

GENERAL

Materials

All coupling parts such as cam parts, pocket parts, spacers, hub parts and mounting parts are manufactured from high grade cast iron with lamellar or spheroidal graphite, or from steel. The sleeve pipes of the type DK spacers are made from aluminum.

Flexible materials

Material/description	Hardness	Marking	Ambient temperature
N-EUPEX series			
NBR standard type	80 ShoreA	Flexible black with blue stripe	-30 °C ... +80 °C
NBR electrically insulating	80 ShoreA	Flexible green	-30 °C ... +80 °C
NBR soft	65 ShoreA	Flexible black with green stripe	-30 °C ... +80 °C

NBR hard	90 ShoreA	Flexible black	-30 °C ... +80 °C

The technical data do not include the flexible variants NBR low-backlash, HNBR high temperature and NR low temperature. Technical data, prices and article numbers can be found at www.flender.com

Standard types of N-EUPEX and N-EUPEX DS pin coupling

Type	Description
A	Fail-safe, 3-part
B	Fail-safe, 2-part
D	Fail-safe, 3-part, flange variant
E	Fail-safe, 2-part, flange variant
DK	Fail-safe, double-cardanic, with spacer
DKS	Fail-safe, double-cardanic, short length
H	Fail-safe, with adapter
P	Fail-safe, 3-part, with brake drum
O	Fail-safe, 2-part, with brake drum
DBDR	Fail-safe, 3-part, with brake disk, brake disk radially dismountable
ABD	Fail-safe, 3-part, with brake disk
ERN	Fail-safe, 2-part, with slip unit
ADS	Non-fail-safe, 3-part
BDS	Non-fail-safe, 2-part
HDS	Non-fail-safe, with adapter

Special types of N-EUPEX pin coupling on request

Type	Description
AT	Fail-safe, 3-part, with Taper clamping bush
BT	Fail-safe, 2-part, with Taper clamping bush
F	Fail-safe, 3-part, with intermediate shaft
G	Fail-safe, 2-part, with intermediate shaft
K	Fail-safe, 3-part, with brake drum to customer's requirement
L	Fail-safe, 2-part, with brake drum to customer's requirement
M	Fail-safe, 2-part, with flange dimensions to SAE J620d
DBD	Fail-safe, 3-part, with brake disk
EBD	Fail-safe, 2-part, with brake disk

Further application-related coupling types are available. Dimension sheets for and information on these are available on request.

Modular principle of N-EUPEX types

N-EUPEX DK/DKS

In the case of larger radial misalignment, double-cardanic N-EUPEX couplings can be supplied in addition to the modular system. The spacer (part 60 resp. 70) is centered with the help of the N-EUPEX elastomer elements. Any radial misalignment that emerges between the shaft ends will accordingly be equalized through a corresponding tilt angle in the elastomer joints with this two-joint versions. In the DK version, the separated hubs (part 41) made from steel facilitate simple installation. The DKS version is characterized by a reduced shaft distance.

GENERAL

Types N-EUPEX

Types A and ADS

Types B and BDS

Type D

Type E

Types N-EUPEX with adapter

Type DK

Type DKS

Types H and HDS

Type N-EUPEX with brake disk/brake drum

Type N-EUPEX with torque control

Note

- Further application-specific coupling types are available. Dimension sheets for and information on these are available on request.

710	42900	71000	93500	128700	233750	2339	5608	13400	0.9	0.07

For coupling fatigue torque:
 $T_{KW} = 0,15 \cdot T_{KN}$, where $T_N > T_W$ must be adhered to.

N-EUPEX shaft distance S and radial misalignment ΔK_r

N-EUPEX (single-joint coupling)

Radial misalignment ΔK_r and angular misalignment ΔK_w as well as changes in gap dimension are equalized in a elastomer joint. Values for ΔS can be found in the respective type selection tables.

N-EUPEX DK/DKS (two-joint coupling)

Radial misalignment ΔK_r and angular misalignment ΔK_w as well as changes in gap dimension are equalized in two elastomer joints. Values for ΔS can be found in the corresponding type selection tables.

¹⁾ The maximum speed for the respective type must be noted. For additional information on the allowable shaft misalignment, please refer to the operating instructions.

²⁾ For sizes 80 to 280, in case of higher temperatures the temperature factor FT according to the table on page E/19 in the Introduction has to be considered.

280	5500	13750	525	-	-	-	-	-	1.1	0.08

For coupling fatigue torque:
 $T_{KW} = 0,15 \cdot T_{KN}$, where $T_N > T_W$ must be adhered to.

**Torsional stiffness and damping
 (single-joint or two-joint coupling)**

The values stated in the above table apply to a capacity utilization of 50 %, an excitation amplitude of 10 % T_{KN} with frequency 10 Hz and an ambient temperature of 20 °C. The dynamic torsional stiffness is load-dependent and increases in proportion to capacity utilization. The following table shows the correction factors for different rated loads.

$C_{Tdyn} = C_{Tdyn\ 50\%} \cdot FKC$

	Load T_N / T_{KN}						
	20 %	40 %	50 %	60 %	70 %	80 %	100 %
Correction factor FKC							
65/80 ShoreA							
HP (size 58–68, 315–710)	0,50	0,82	1,00	1,20	1,40	1,63	2,10
HP (size 80 – 280)	0,55	0,85	1,00	1,14	1,29	1,42	1,69

The damping coefficient is $\Psi = 1.4$ for the 65/80 ShoreA packages and $\Psi = 1.2$ for the HP package

Furthermore, torsional stiffness and damping depend on the ambient temperature, on the frequency and on the amplitude of the torsional vibration excitation. More precise torsional stiffness and damping parameters on request.

Due to the manufacturing process and ageing of the elastomers, the tolerance for the dynamic stiffness is $\pm 20\%$.

**Permitted shaft misalignment
 (single-joint or two-joint coupling)**

The permitted shaft misalignment depends on the operating speed. As the speed increases, lower shaft misalignment values are permitted. The correction factors for different speeds are specified in the following table. The maximum speed for the respective coupling size must be noted!

$\Delta K_{perm} = \Delta K_{1500} \cdot FKV$

	Speed in rpm			
	500	1000	1500	3000
Correction factor FKV	1.7	1.2	1.0	0.7

For fitting, the maximum gap dimension of $S_{max.} = S + \Delta S$ and the minimum gap dimension of $S_{min.} = S - \Delta S$ are permitted.

Shaft misalignments ΔK_r and ΔK_w may occur simultaneously.

¹⁾ The maximum speed for the respective type must be noted. For additional information on the allowable shaft misalignment, please refer to the operating instructions.
²⁾ The angular misalignment ΔK_w refers to the maximum additional tilting of the shaft axes.

Configurable variants¹⁾

- ØD1 Without finished bore
With finished bore
- ØD2 Without finished bore
With finished bore

Notes

- For dimension U1, see type A on page Page 7/11.
- During assembly, the gap dimension S2 must not exceed the permissible tolerance of +1 mm.
- Weights and mass moments of inertia apply to maximum bores.

Ordering example

- N-EUPEX H coupling, size 160, S = 200 mm
- Part 1: Bore D1 60H7 mm, keyway to DIN 6885-1 and set screw
- Part 2: Bore D2 55H7 mm, keyway to DIN 6885-1 and set screw

Article no.: 2LC0170-7AG99-0AD0 L1E+M1D

¹⁾ To identify complete item numbers specifying the available finish boring options and – if necessary – further order options, please use our configurators on flender.com.

²⁾ The hub diameter HD1 can be smaller for small bores

556	21200	42400	1540	2.5	0.65	0.07

For coupling fatigue torque:
 $T_{KW} = 0,15 \cdot T_{KN}$, where $T_N > T_W$ must be adhered to.

Note

For fitting, the maximum gap dimension of $S_{max.} = S + \Delta S$ and the minimum gap dimension of $S_{min.} = S - \Delta S$ are permitted.

¹⁾ The correction factors for torsion spring stiffness and permitted shaft misalignment correspond to the specifications for the puncture-proof types Page 7/9

²⁾ Does not apply to type HDS.

³⁾ The maximum speed for the respective type must be noted. For additional information on the allowable shaft misalignment, please refer to the operating instructions.

Configurable variants¹⁾

- ØD1 Without finished bore
With finished bore
- ØD2 Without finished bore
With finished bore

Notes

- For dimension U1, see type ADS on page Page 7/32 and type BDS on page Page 7/33
- During assembly, the gap dimension S2 must not exceed the permissible tolerance of +1 mm.
- For sizes 305 to 472 the outer diameter of part 5 and part 7 is smaller than ØDA.
- Weights and mass moments of inertia apply to maximum bores.

Ordering example

- N-EUPEX HDS coupling, size 103, S = 100 mm
- Part 1: Bore D1 42H7 mm, keyway to DIN 6885-1 and set screw
- Part 5: Bore D2 32H7 mm, keyway to DIN 6885-1 and set screw
- Coupling micro-balanced G6.3 at 1500 rpm in accordance with half parallel key standard

Article no.: 2LC0110-3AC99-0AA0-Z L0X+M0T+W02+Y95
Plain text to Y95: G=6.3;n=1500rpm

¹⁾ To identify complete item numbers specifying the available finish boring options and – if necessary – further order options, please use our configurators on flender.com.
